Forecast Discussion

NWS Detroit/Pontiac · 739 PM EDT Sun Oct 18 2026

- Wind gusts of 20 to 30 mph diminish with sunset this evening.

- Dry weather and mild temperatures hold firm through the week.

&&

.AVIATION...

Drainage flow off of strong surface high pressure to the south and east of Southeast Michigan will maintain VFR conditions throughout the period. Model data supports strongly anticyclonic flow trajectories throughout the period. There is little to no signal for any fog Monday morning, and latest moisture progs suggest high cloud will only become possible after 22Z Monday.

D21/DTW Convection...There will be no thunderstorms through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* None.
