Forecast Discussion

NWS Detroit/Pontiac · 1242 PM EST Wed Nov 11 2026

- Light rain overspreads SE MI this afternoon and evening.

- A much colder airmass arrives Thursday, triggering gusty north wind and lake effect rain/snow showers Thursday through Saturday. Minor wet snow accumulations will be possible in the Thumb.

&&

.AVIATION...

A pair of lows will impact the region through the forecast period resulting in MVFR conditions and periods of rain. One low is tracking just south of the state line while a second low will drop SE through the state this evening pulling a cold front along with it. Overall we'll see deteriorating conditions with lowering ceilings and periods of reduced visibilities within areas of light rain. A west to east band of rain is setting up across Mid MI which will impact MBS and maybe FNT this afternoon, it fills in southward across the rest of the terminals this evening for a few hours. Ceilings will lower through the night to MVFR with the front pulling lower stratus and showers through Thursday morning. Light winds this afternoon will become more northeasterly this afternoon as the southern low draws near, and then becomes gusty out of the north behind the cold front for Thursday with gusts of 20 to 25 knots.

.DTW THRESHOLD PROBABILITIES...

* Medium for ceilings at or below 5,000 feet late this afternoon-evening. High tonight into Thursday morning.
