Forecast Discussion

NWS Detroit/Pontiac · 446 AM EDT Tue Oct 13 2026

- Breezy with well above normal warmth today.

- Scattered showers tonight into tomorrow south of I-69.

- Turning more seasonable tomorrow into Thursday with additional rainfall Thursday afternoon into Thursday night.

- Strong cold front brings more windy conditions Friday as conditions becomes chillier Friday night into Saturday.

&&

.AVIATION...

Last pockets of light showers are vacating the area early this morning setting the stage for a VFR, mostly sunny day for the bulk of the terminals. A lingering frontal boundary over northern lower MI keeps lower VFR cloud cover near MBS with guidance suggesting it gradually expands back of the airport by afternoon. Respectable remnant gradient over southern lower MI today leads to a breezier day with southwest gusts able to reach peak gusts of 25-30kts during the daylight hours. Aforementioned frontal boundary sags south through the area overnight as a shortwave tracks across the northern Ohio Valley. This offers another round of scattered showers with isolated thunder chances mainly south of I-69.

D21/DTW Convection... Passing wave to the south as a weak cold front sags through tonight offers a low chance for isolated thunder however probability at the airport is too low to currently mention in TAF.

.DTW THRESHOLD PROBABILITIES...

* Low for thunderstorms tonight.
