Forecast Discussion

NWS Detroit/Pontiac · 658 AM EDT Thu Oct 29 2026

- Much above normal temperatures continue today with highs again into the 70s. These high temperatures are 10 to 15 degrees above normal.

- There is a chance of showers and isolated thunderstorms this afternoon and evening.

- Dry and continued mild this weekend.

&&

.AVIATION...

A cold front entering the western Great Lakes this morning is on schedule to cross central and SE Mi today. A moisture axis out ahead of the front supports broken coverage of mid level clouds that thicken and lower as the front approaches. Clusters of showers within the cloud pattern remain weak and widely scattered during the morning, and then gain coverage and intensity with a boost from afternoon instability this afternoon. A rumble of thunder is also reachable as the front sweeps through the FNT to DTW area late in the day.

Upstream observations early this morning match up pretty well with model data projecting a few hours of MVFR ceiling within the frontal zone. There is also a rapid clearing trend in the dry slot immediately post front and before cooler NW boundary layer flow can activate clouds off the Great Lakes. Wind direction from about 300 degrees favors the FNT to MBS area for borderline VFR/MVFR ceiling late tonight into Friday morning.

D21/DTW Convection... There is a low chance for an isolated thunderstorm mid to late afternoon as a cold front moves through the area.

.DTW THRESHOLD PROBABILITIES...

* Moderate for ceiling at or below 5000 feet this afternoon and evening.

* Low for thunderstorms this afternoon and evening (mainly 20z to 00z).
