Forecast Discussion

NWS Detroit/Pontiac · 1210 PM EST Thu Nov 5 2026

- Briefly drier to start today before scattered showers return late today and persist into Friday.

- Temperatures will feel much cooler as highs return to average for early November.

- Drier weather and above normal temperatures favored for the first part of next week.

&&

.AVIATION...

Cold air advection in the wake of a cold front coupled with the broad troughing pattern will maintain copious cloud cover and cig heights ranging around 2kft to 3.5kft. The boost in moisture advection off of Lake Michigan has focused these lower-end mvfr ceiling heights across KFNT to KMBS along with rain showers.

For the remainder of the afternoon and evening, rain shower chances persist across these two aforementioned sites as the boosted mixing depths help promote gust potential around 20 to 25 knots. Tonight a secondary cold front will push across SE MI, which will result in a quick flip from southwest flow to northwest flow along with rain shower chances as a line of showers will be possible along this cold front. A very brief period for IFR cigs (1-3 hours) will be possible with the passage of the cold front, especially with any shower activity. The reinforcement of colder air will sustain MVFR cigs overnight.

.DTW THRESHOLD PROBABILITIES...

* High for ceiling 5000 ft or less through tonight.

&&
