Forecast Discussion

NWS Detroit/Pontiac · 602 AM EDT Fri Oct 30 2026

- Cooler but still above normal temperatures today and Saturday.

- Low chance for a few light showers late Saturday towards central MI.

- Warm conditions with humidity will be possible early to middle next week.

&&

.AVIATION...

Shallow post-frontal moisture advection within prevailing northwest flow will maintain some filaments of lower stratus this morning. Observational and satellite trends suggest limited enough coverage to maintain simply a scattered mention thru the duration of the morning period. Otherwise, increasingly dry and stable conditions will offer mostly clear skies during the daylight period. High cloud thickens and gradually lowers tonight as high pressure shifts through the region. Existing north to northwest wind turning light and variable overnight.

D21/DTW Convection...Thunderstorms are not forecast through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* low for cigs at or below 5000 ft Friday morning.

&&
