Forecast Discussion

NWS Detroit/Pontiac · 627 PM EST Thu Nov 5 2026

- Showers increase coverage across the area tonight leading to an active pattern that continues Friday and Friday night.

- Temperatures return to a more typical range for early November but are much cooler than recent days.

- Dry weather helps temperatures rise a few degrees above normal again during the weekend and early next week.

&&

.AVIATION...

Strong absolute vorticity maximum will dig directly into Southeast Michigan between 06-15z Friday. Height falls and differential cyclonic vorticity advection is forecasted to result in an active low-midlevel frontogenesis axis directly over the forecast area sometime between 03-09z, resulting in an increasing coverage of rain. Maintained the inherited TEMPO for MVFR rain. This fgen will coincide with secondary cold front or dewpoint gradient that will result in another round of cold advection. Steepening lapse rates with saturation will result in MVFR or VFR stratocumulus Friday. Northwest wind Friday of 10 to 20 knots.

.DTW THRESHOLD PROBABILITIES...

* High for ceiling 5000 ft or less tonight and Friday.

&&
