NWS PERIOD DETAIL

PERIOD	TEMP	DETAIL
Tonight	**52°F**	Rain before 11pm, then rain and a slight chance of thunderstorms. Cloudy. Low around 52, with temperatures rising to around 63 overnight. South southwest wind 8 to 15 mph, with gusts as high as 26 mph. Chance of precipitation is 100%. New rainfall amounts between a tenth and quarter of an inch possible.
Friday	**58°F**	Rain likely. Mostly cloudy. High near 58, with temperatures falling to around 52 in the afternoon. West northwest wind 14 to 17 mph, with gusts as high as 30 mph. Chance of precipitation is 70%. New rainfall amounts less than a tenth of an inch possible.
Friday Night	**34°F**	A slight chance of rain between 10pm and midnight. Partly cloudy. Low around 34, with temperatures rising to around 36 overnight. North northwest wind 13 to 17 mph, with gusts as high as 33 mph. New rainfall amounts less than a tenth of an inch possible.
Saturday	**52°F**	Sunny, with a high near 52. Northwest wind 6 to 12 mph, with gusts as high as 20 mph.
Saturday Night	**38°F**	Clear, with a low around 38. West southwest wind around 8 mph.
Sunday	**62°F**	Sunny, with a high near 62.
Sunday Night	**42°F**	Clear, with a low around 42.
Monday	**66°F**	Sunny, with a high near 66.
Monday Night	**44°F**	Partly cloudy, with a low around 44.
Tuesday	**68°F**	Mostly sunny, with a high near 68.
Tuesday Night	**44°F**	Mostly clear, with a low around 44.
Wednesday	**66°F**	Sunny, with a high near 66.
Wednesday Night	**45°F**	Mostly clear, with a low around 45.
Thursday	**67°F**	Mostly sunny, with a high near 67.

Forecast Discussion

NWS Detroit/Pontiac · 755 PM EDT Thu Oct 15 2026

- Showers expand in coverage and intensity overnight.

- A cold front delivers gusty winds (+35 mph) and chillier conditions Friday, with periods of showers.

- Frost/freeze conditions are possible Friday night into Saturday morning with temperatures minimizing in the low 30s.

- Turning drier over the weekend and through the first half of next week with a gradual warm-up starting Sunday.

&&

.AVIATION...

Surface low pressure is analyzed roughly 80 miles west-southwest of KORD at issuance and will lift northeast through the course of the night. For now, this has maintained a broad plume of MVFR stratus at all terminal sites with vsby restrictions confined to the northern portions of the airspace. Expectation however is for upstream IFR cigs/vsbys to move in tandem with the low pressure center and reach the airspace late this evening-overnight (between 02z-05z). Have not seen any lightning so far with accompanying shower activity, but there will be a brief opportunity for a few hundred J/kg of MUCAPE to lift into southern portions of the airspace between about 03z and 08z tonight. An isolated thunderstorm cannot be ruled out, but affords very low confidence in impacting any one terminal site. Once the surface low passes through around 06z, winds quickly shift to the southwest and become gusty amidst a strong low level jet. Forecast soundings show the boundary layer to be fairly well-mixed, favoring gusty 20-25 knot SW winds rather than materializing as low level wind shear. Gradual improvement in ceilings expected through Friday, but will be challenged by lake moisture as winds veer to the northwest throughout the daytime hours.

D21/DTW Convection...Very low probability for an isolated thunderstorm to develop before 08z.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings at or below 5,000 feet through the TAF period.

* Low for thunder through 08z.
