Forecast Discussion

NWS Detroit/Pontiac · 712 AM EDT Wed Oct 14 2026

- Temperatures closer to normal and drier today, followed by additional rainfall late Thursday afternoon into early Friday morning.

- A strong cold front delivers gusty winds and much chillier conditions Friday, with a few showers in spots.

- Turning drier through the weekend with slightly warmer readings by Sunday.

&&

.AVIATION...

Cold front has settled just south of Michigan to start this TAF period with just higher coverage of shower activity along the state line now pushing east. Expecting a mix of MVFR and low VFR clouds this morning with a lifting to predominately SCT/BKN low VFR for the remainder of the day. Light NNW winds veer to the N-NE by this evening with a high pressure building across the northern Great Lakes, which will also supply the drier air to help improve the ceilings this afternoon. It appears northeasterly winds for tonight will help bring a return to greater coverage of Lake Huron stratus that brings a return to SCT to BKN MVFR ceilings.

D21/DTW Convection...No thunderstorms today or tonight.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings at or below 5,000 feet this morning. Medium for this afternoon.
