Forecast Discussion

NWS Detroit/Pontiac · 616 PM EST Mon Nov 9 2026

- Sunshine with temperatures climbing into the upper 50s to lower 60s tomorrow.

- Rain chances increase late Wednesday into Thursday, with an unsettled pattern continuing into the first half of the weekend.

- A much colder airmass arrives Thursday, triggering lake effect rain and snow showers late Thursday through Saturday.

&&

.AVIATION...

Weak shortwave energy pushing into the Lake Superior basin is leading to large scale support for ascent and high cloud across Lower Michigan this evening. Forecast soundings strongly support residual stability winning out and keeping a very dry environmental profile between 2.5 and 8.0 kft agl. Period of midlevel fgen does push through between 09-14z but no precipitation expected. Flow trajectories become strongly anticylonic after 15z Tuesday causing downward vertical motion. Northwest winds Tuesday afternoon 10 to 20 knots.

.DTW THRESHOLD PROBABILITIES...

* None.
