Forecast Discussion

NWS Detroit/Pontiac · 601 AM EDT Wed Oct 21 2026

- Areas of fog tonight.

- Mild and dry through the week.

&&

.AVIATION...

East-southeastly flow off western Lake Erie led to the development of a fog plume overnight. With the flow turning more south-southeasterly, much of this fog has remained south and west of the terminals. A gradual weakening of the flow toward daybreak may support some shallow radiational fog at the TAF sites. Otherwise, expansive high pressure across the region will sustain light winds and clear skies through today.

D21/DTW Convection... Thunderstorms are not forecast through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* None.

&&
