Forecast Discussion

NWS Detroit/Pontiac · 704 PM EDT Tue Oct 20 2026

- Areas of fog tonight.

- Mild and dry through the week.

&&

.AVIATION...

Clear skies and light winds prevail through the evening period as high pressure maintains dry and stable conditions. Conditions will become favorable for some degree of fog and/or very low stratus development late tonight. Forecast will continue to highlight a window for MVFR to IFR visibility restrictions with an entry level mention for very low stratus. There remains potential for one or more southeast Michigan terminals to witness a period of LIFR in fog/stratus, although confidence in occurrence remains too low to include attm. Any lingering fog/stratus will lift thru late morning, affording another period of clear skies with light wind for the remainder of the daylight period.

D21/DTW Convection... Thunderstorms are not forecast through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* Low for cigs/vsby to fall below 200ft and/or 1/2SM late tonight.

&&
