Forecast Discussion

NWS Detroit/Pontiac · 1222 PM EST Mon Nov 9 2026

- Warming trend today and Tuesday with highs around 60 degrees Tuesday.

- Rain chances increase late Wednesday into Thursday, with an unsettled pattern continuing into the weekend.

- A much colder airmass arrives Thursday, triggering lake effect rain and snow showers late Thursday through Saturday.

&&

.AVIATION...

Marginal MVFR / low-end VFR ceilings continue to mix out across the Thumb Region this afternoon, with MBS/FNT/PTK/DET now west of the remaining stratus. These ceilings will continue to erode through this afternoon, with high clouds streaming in from the northwest. Northwest winds will back this afternoon and evening, becoming southwesterly by/around 00Z as high pressure to our south crests the region. Late tonight through Tuesday, low pressure will track east across Ontario and into Quebec, sending a dry cold front across southeast Michigan. Along the front, winds will shift from southwest to west-northwest with FROPA expected between 09-12Z Tuesday. Some shallow boundary layer moisture lingers into the overnight hours, with some guidance hinting at a narrow window for shallow BR to develop. This narrow window will rely heavily on the departure of overnight mid/high clouds and how much time is left for an uptick in nocturnal cooling before/around sunrise.

.DTW THRESHOLD PROBABILITIES...

* None.
