Forecast Discussion

NWS Detroit/Pontiac · 718 PM EDT Mon Oct 19 2026

- Dry weather with mild afternoon highs and cool morning lows will
  persist into the weekend.

&&

.AVIATION...

High pressure is reinforced over the Great Lakes while taking a
position that shifts wind direction from light SW to light NE into
SE Mi late tonight and Tuesday morning. This creates a chance for
inland transport of Lake Huron boundary layer moisture capable of
fog or low stratocu production. It is a low predictability scenario
but one worth monitoring in observational trends for later updates.
Conditions are otherwise VFR under clear sky this evening and under
increasing cirrus later tonight and Tuesday morning. Light easterly
wind continues during the afternoon into Tuesday evening.

D21/DTW Convection... Thunderstorms are not forecast through the TAF
period.

.DTW THRESHOLD PROBABILITIES...

* None.

&&
