Forecast Discussion

NWS Detroit/Pontiac · 720 PM EST Mon Nov 2 2026

- Mild Tuesday with near record high temperatures in the mid to upper 70s.

- Breezy Tuesday with gusts to around 30 mph possible.

- Mild conditions continue Wednesday with increasing potential for light rain.

&&

.AVIATION...

An elongated area of low pressure stretches from western Ontario to the southern Plains, which has been responsible for substantial low level moisture transport into the Great Lakes today. MVFR ceilings blanket the airspace, while the bulk of IFR ceilings are still over IL/IN. LCL heights are expected to steadily lower over the next few hours as dewpoints climb and nocturnal cooling takes place, leading to a period of IFR potential between 02z and 09z. While isolated stations are reporting sub-1000 foot ceilings, it seems it will take the arrival of higher dewpoints to become fully entrenched in IFR. Arrival of the surface warm front Tuesday morning helps push the low level moisture plume north and scatters out restrictions through the morning. The scattering trend then continues into the afternoon while the pressure gradient gains influence to strengthen southwest flow toward 15 knots Tuesday afternoon.

For DTW... MVFR ceilings persist through early Tuesday morning, with a period of IFR ceilings possible due to nocturnal cooling and continued moisture advections. A transition back to VFR is then expected Tuesday morning with ceilings climbing above 5000 ft for the afternoon.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings 5000 ft or less tonight. Moderate Tuesday morning becoming low Tuesday afternoon.
