BOTTOM LINE · OPERATIONAL IMPACTS, NEXT 48H+

STORMS	**Isolated thunder possible Tue 12 AM–6 AM** NWS: elevated instability only, no severe concerns per DTX AFD. Plan outdoor/roof work and lifts around it; lightning = stand down.	WATCH
RAIN	**Rain windows ≥30%: Tue 1 AM, Wed 6 AM** Peak 49% at Wed 3 AM. Amounts < 0.1 in. Protect open panels/terminations and stored gear.	WATCH
WIND	**Gusts to 29 mph (Tuesday)** Sustained up to 16 mph W. Secure ladders, sheet goods and roof-top work; high-profile vehicles fine below ~40 mph.	WATCH
HEAT	**Unseasonably warm: 81°F peak (Tue 3 PM)** Dewpoints ~59°F. Hydrate in attics/mech rooms and lifts.	NOTE
TEMP DROP	**48h low 58°F · 7-day low 36°F (Friday Night)** Frost/freeze-level lows in the 7-day. Watch freeze-sensitive equipment, outdoor startups, coil freeze stats.	PLAN
TRAVEL	**No hazardous weather expected (HWO)** Roads: wet pavement only during rain windows above.	CLEAR

HAZARDOUS WX OUTLOOK — NONE

Today/Tonight: No hazardous weather is expected at this time.
Days 2–7: No hazardous weather is expected at this time.

NWS PERIOD DETAIL

PERIOD	TEMP	DETAIL
Columbus Day	**80°F**	Mostly sunny. High near 80, with temperatures falling to around 76 in the afternoon. South southwest wind around 10 mph, with gusts as high as 20 mph.
Tonight	**65°F**	A slight chance of thunderstorms and a slight chance of rain between midnight and 1am, then a chance of rain and a slight chance of thunderstorms between 1am and 2am, then a chance of thunderstorms and a chance of rain. Partly cloudy, with a low around 65. Southwest wind around 9 mph, with gusts as high as 18 mph. Chance of precipitation is 40%. New rainfall amounts less than a tenth of an inch possible.
Tuesday	**81°F**	Sunny. High near 81, with temperatures falling to around 79 in the afternoon. West southwest wind 9 to 16 mph, with gusts as high as 29 mph. New rainfall amounts less than a tenth of an inch possible.
Tuesday Night	**58°F**	A chance of rain after 3am. Partly cloudy, with a low around 58. Northwest wind 2 to 14 mph, with gusts as high as 28 mph. Chance of precipitation is 50%. New rainfall amounts less than a tenth of an inch possible.
Wednesday	**67°F**	A chance of rain before 2pm. Mostly cloudy, with a high near 67. North northwest wind 2 to 8 mph. Chance of precipitation is 40%. New rainfall amounts less than a tenth of an inch possible.
Wednesday Night	**47°F**	Mostly cloudy, with a low around 47.
Thursday	**62°F**	A chance of rain after 2pm. Mostly cloudy, with a high near 62.
Thursday Night	**50°F**	Rain. Cloudy, with a low around 50.
Friday	**61°F**	A chance of rain. Mostly cloudy, with a high near 61.
Friday Night	**36°F**	A slight chance of rain before 8pm. Partly cloudy, with a low around 36.
Saturday	**54°F**	Sunny, with a high near 54.
Saturday Night	**37°F**	Mostly clear, with a low around 37.
Sunday	**60°F**	Sunny, with a high near 60.
Sunday Night	**44°F**	Partly cloudy, with a low around 44.

Forecast Discussion

NWS Detroit/Pontiac · 410 PM EDT Mon Oct 12 2026

- Scatted showers with a few isolated thunderstorms overnight.

- Unseasonably warm Tuesday with highs above 80F.

- Showers possible Tuesday night into Wednesday.

- Turning more seasonable Thursday and Friday, then becoming chillier
  over the weekend.

&&

.DISCUSSION...

Very warm today with a record high already broken at FNT, based on a
20Z obs of 85F, but even warmer readings exist further northwest as
IKW, MBS, and HYX log readings of 88F, 86F, and 86F, respectively.

An active period of weather gets underway this week as the upper
level jet approaches the Great Lakes and then fixates through the
workweek. At the surface, a chain of surface low pressures is
anchored to a stationary front extending from the High Plains to the
Upper Midwest. A shortwave trough will eject from a deep upper low
stuck over Nevada tonight to establish a primary surface wave that
will reach Lower Michigan on Tuesday. Meanwhile, a 594 dam 500 mb
ridge of high pressure situated over the Gulf Coast supports
continued anticyclonic warm/moist advection into the region.
Moisture metrics are already on the rise this afternoon with most
ASOS/AWOS sites reporting 60+ dewpoints. This ensures a mild night
with overnight lows in the mid (perhaps upper) 60s, or about 20F
above climatological normals. Before the low makes any progress into
northern Lower, isentropic upsloping produces an uptick in mid
column saturation (700-500 mb) while drier air resides within an
elevated warm layer (925-800 mb). Scattered overnight showers will
partially fill in overnight, and remain elevated. Forecast soundings
show some elevated instability, maximizing at around 200 J/kg, so
some rumbles of thunder cannot be ruled out. No severe weather
concerns given the lack of CAPE density for severe hail and near-
surface stability to dampen the wind gust response.

CAMs show conditions drying out pretty quickly Tuesday morning given
how quickly low and mid level moisture is stripped out, after flow
veers WNW. The main forecast consideration will be temperature
trends for the rest of the day with 925 mb temperatures starting out
in the low 20s (Celsius). Skies should also clear out for the peak
diurnal heating cycle, adding to the insolation potential. Models
differ in timing the arrival of the primary cold front, but the more
delayed the boundary is, the higher the possible max temperature
will be. The latest NBM 5th percentile has 80s across most of Metro
Detroit, so NWP confidence is high for another day with highs of
80F. The record high for DTW on October 13 is within reach at 83F in
1975. Seasonably mild Tuesday night behind the front, although still
a 20+ degree nocturnal drop, even with thickening cloud cover.

The cold front looks to stall out near the Michigan/Ohio border
Tuesday night and Wednesday as the jet axis approaches aloft.
Numerous shortwave interactions promote a perturbed geopotential
height field offering additional chances for precipitation. This
will be augmented by the Gulf ridge which will still be in place,
renewing theta-e advection. Limited CAPE, but non-zero leaves a
chance for a rumble of thunder. Any shower activity that continues
into the daylight hours will be brief as shortwave ridging builds in
from the west, and flow flips NNE, dislodging the boundary. This
also allows a more seasonable airmass to filter in from Ontario.
Cold advection persists into Thursday, before the next wave of low
pressure lifts into southern Lower Thursday evening or during the
overnight hours. This brings another round of rain and a cold front.
Cooler and drier conditions develop Friday, lasting through the
weekend.

&&

.MARINE...

Low pressure will travel from the Plains into northern lower
Michigan tonight through tomorrow morning. This will quickly
strengthen the pressure gradient ahead of the arrival of this
system, increasing the magnitude of southwest flow across southern
Lake Huron, Lake St. Clair, and Lake Erie. More tempered northerly
flow will be found across northern Lake Huron through the morning.
As low pressure progresses east into New England, wind direction
will back more westerly through the afternoon, which will bring a
window for some breezy conditions across the southern Great Lakes.
Wind gusts around 20 to 25 knots will be possible, with wind speeds
quickly diminishing through the evening as the pressure gradient
weakens. Rain showers with some isolated thunderstorms will be
likely through tomorrow.

A cold front will then push through the Great Lakes Wednesday,
stalling across southern Michigan by the afternoon. The favorable
northwest fetch will produce wind gusts 20 to 30 knots across
northern Lake Huron. High pressure to then build in through Thursday
which will bring a period of light winds for the day. Confidence is
increasing for a strong cold front to pass Friday into Saturday.
Instability will increase over the lakes in the wake of the front
given the advent of cold air over the warmer lake waters. Coupled
with longer duration northwest flow, a longer duration gale event is
looking increasingly likely to end the week.

&&

.CLIMATE...

Record high max temperatures for October 13th:

Detroit: 83 Degrees (Set in 1975)
Flint: 83 Degrees (Set in 1975)
Saginaw: 86 Degrees (Set in 1930)
