Forecast Discussion

NWS Detroit/Pontiac · 451 AM EST Mon Nov 2 2026

- Mostly cloudy and mild today and Tuesday. Near record
high temperatures Tuesday.

- Mild conditions continue Wednesday with increasing potential for
light rain.

&&

.AVIATION...

Southerly warm advection develops this morning as low pressure lifts
into northern Minnesota. Increasing moisture within this flow
results current mid-cloud steadily lowering late morning-afternoon
towards low VFR and eventually MVFR ceilings by evening. Current of
low level moisture is directed into central Michigan late this
evening with the northern TAF sites residing along its periphery. As
such, a period of IFR remains possible so maintained inherited
Tempos. Some pockets of drizzle/light rain are possible mainly late
evening/tonight however coverage and intensities currently don't
warrant mention in TAFs. Developing warm sector expands over SE MI
by Tuesday AM supporting breezier conditions but increased mixing
which should allow for a return toward VFR skies.

For DTW...Ceilings will drop below 5000 feet early afternoon as
elevated portions of a warm front lift into SE Michigan. Ceilings
will then continue to lower to MVFR by evening. Lower potential to
reach IFR given drier resident air and main moisture directed
further north. Drizzle/light rain will also be plausible, but is not
expected to cause any restrictions. Ceiling improvements expected by
Tuesday morning.

.DTW THRESHOLD PROBABILITIES...

* High in ceilings aob 5000 ft early afternoon and evening.
