NWS PERIOD DETAIL

PERIOD	TEMP	DETAIL
This Afternoon	**68°F**	Mostly cloudy. High near 68, with temperatures falling to around 64 in the afternoon. South wind around 9 mph, with gusts as high as 21 mph.
Tonight	**55°F**	Mostly cloudy. Low around 55, with temperatures rising to around 57 overnight. South wind around 9 mph, with gusts as high as 20 mph.
Tuesday	**74°F**	Mostly sunny. High near 74, with temperatures falling to around 72 in the afternoon. South wind around 12 mph, with gusts as high as 24 mph.
Tuesday Night	**60°F**	Mostly cloudy, with a low around 60. South wind around 12 mph, with gusts as high as 26 mph.
Wednesday	**71°F**	Rain likely after 7am. Mostly cloudy, with a high near 71. South wind around 14 mph, with gusts as high as 26 mph. Chance of precipitation is 70%. New rainfall amounts less than a tenth of an inch possible.
Wednesday Night	**52°F**	Rain likely. Mostly cloudy, with a low around 52. Chance of precipitation is 70%.
Thursday	**65°F**	A slight chance of rain. Partly sunny, with a high near 65.
Thursday Night	**45°F**	A slight chance of rain. Mostly cloudy, with a low around 45.
Friday	**58°F**	A chance of rain. Mostly cloudy, with a high near 58.
Friday Night	**39°F**	A chance of rain before 1am. Mostly cloudy, with a low around 39.
Saturday	**55°F**	Mostly cloudy, with a high near 55.
Saturday Night	**34°F**	A slight chance of rain between 7pm and 1am. Mostly cloudy, with a low around 34.
Sunday	**55°F**	Partly sunny, with a high near 55.
Sunday Night	**36°F**	Mostly cloudy, with a low around 36.

Forecast Discussion

NWS Detroit/Pontiac · 1242 PM EST Mon Nov 2 2026

- Mostly cloudy and mild today and Tuesday. Near record high
  temperatures Tuesday.

- Mild conditions continue Wednesday with increasing potential for
  light rain.

&&

.AVIATION...

A complex of low pressure spans the entire Plains states into
central Canada today, and this is the focus of aviation conditions
in the Great Lakes today through Tuesday. The system has a primary
low center near the SD/MN border with a warm front extending into
the Ohio valley that is accumulating a generous supply of moisture
drawn northward from the Gulf coast. A broad expanse of MVFR ceiling
is the result which is moving northward across southern Lower Mi
this afternoon. These clouds settle into IFR this evening with some
pockets of drizzle as the low level jet ramps up. Drizzle is better
added to the forecast as observational trends dictate, however the
IFR mention has plentiful support from the Ohio valley to the
Midwest.

A south to north break back into VFR follows across the area
late tonight and Tuesday morning as the system warm sector builds
into the region. Model projections capture the pattern reasonably
well and bring VFR ceiling up toward MBS during Tuesday morning. The
current MS valley moisture axis then feeds additional clouds into the
warm sector for sub 5000 ft VFR during the afternoon north of DTW.
Warm sector boundary layer mixing also leads to SW gusts near 30
knots from mid afternoon into Tuesday evening.

For DTW... MVFR ceiling solidifies this afternoon and then drops
into IFR this evening until a transition back to VFR late tonight or
early Tuesday morning. The VFR return is initially ceiling below
5000 ft which becomes scattered during Tuesday afternoon.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings 5000 ft or less this afternoon and tonight.
  Moderate to low Tuesday.
