Forecast Discussion

NWS Detroit/Pontiac · 103 PM EST Sun Nov 8 2026

- Milder and breezy today with gusts up to 30 mph.

- Gradual warm up early this week with highs climbing into the low 60s Tuesday.

- Rain chances increase late this week ahead of a cool down.

&&

.AVIATION...

Low pressure passing to the north with an attendant cold front is leading to increasingly southwest to west wind gradient this afternoon. Wind gusts of 25-30 knots is expected through the remainder of the afternoon. Increased low level moisture ahead of this front is bringing a corridor of MVFR ceilings, but should remain focused north of the south metro terminals for the next couple hours. Have maintained tempo groups for these ceilings. Eventual lifting to low VFR for the TAF sites later this afternoon into tonight. Gusts ease but will stay sustained to around 10 knots. Dry frontal passage expected with maybe some spotty showers nearby to the east of KMBS and KFNT.

.DTW THRESHOLD PROBABILITIES...

* Medium for ceiling at or below 5000 ft this afternoon into tonight.

&&
