Forecast Discussion

NWS Detroit/Pontiac · 625 AM EST Fri Nov 6 2026

- Cooler today with pockets of light rain and drizzle, especially
  across the Thumb. A northwest breeze keeps wind chill around 40
  degrees.

- Dry weather helps temperatures rise a few degrees above normal
  again during the weekend and early next week.

&&

.AVIATION...

A strong and compact upper level wave will impact all of Lower
Michigan today, with its current position near the Mackinac Straits.
This low will quicky surge south, establishing strong cold advection
across Lake Superior-Lake Michigan that sets up a long fetch for
moisture flux. The main result of this locally will be a blanket of
MVFR stratus today and tonight, aided by a strong mid-level dry slot
aloft. A few showers noted on radar over northern MI may survive to
MBS, although cloud cover/showers will tend to break up away from
their moisture source. With that in mind, opted to include a TEMPO
for occasional VFR conditions to mix in for DTW and nearby terminals
this morning before daytime mixing establishes a healthy stratocu
deck across the airspace. There still may be a few breaks in cloud
cover this afternoon-evening as seen in some model guidance, but on
too small of a scale to include in the TAF at this time. Otherwise,
northwest flow becomes breezy this afternoon with gusts up to 20-25
knots that may linger overnight depending on the track of the
system's surface low. Models have trended east with the low
trajectory, but if it does shift back west at all this would mean
increased shower potential and reinforcement of gusty winds.

.DTW THRESHOLD PROBABILITIES...

* High for ceiling 5000 ft or less today and tonight.
