Forecast Discussion

NWS Detroit/Pontiac · 559 AM EDT Thu Oct 22 2026

- Patchy fog possible this morning with better coverage of fog for Friday morning.

- Mild and dry through the weekend.

&&

.AVIATION...

Recent sfc observations and model soundings suggest the boundary layer moisture may be too shallow to support much if any radiational fog at the terminals this morning, with the advective fog largely focussed east of Lake St Clair. Much like the past week, high pressure and very dry air will sustain light winds and clear skies through the day. Light northerly winds resulting from strengthening high pressure will drive the low level moisture now residing across far northern Lake Huron and points north into Se Mi tonight. This will increase the probabilities for fog and/or low stratus overnight into Friday morning.

D21/DTW Convection... Thunderstorms are not forecast through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* None.
