Forecast Discussion

NWS Detroit/Pontiac · 751 PM EDT Wed Oct 28 2026

- Mild temperatures continue into Thursday with highs in the 70s. These high temperatures are 10 to 15 degrees above normal.

- There is a chance of showers and an isolated thundestorms Thursday afternoon and Thursday night.

- Dry and continued mild this weekend.

&&

.AVIATION...

SE Michigan resides between high pressure off the mid-Atlantic Coast and low pressure over the Upper Midwest. This has resulted in a gradual veering and strengthening trend to surface winds, with direction expected to shift from south this evening to the southwest by Thursday morning. This occurs ahead of a cold front that will reach MBS mid-morning and slowly migrate across the airspace by Thursday evening. Moisture along the front will struggle to survive as the low level jet pushes moisture transport north and remaining moistures mixes with the dry airmass that is currently in place. While a narrow band of showers and/or MVFR cigs may develop along the front Thursday, the broader expectation is for cigs to be low VFR with light rain given the decreasing moisture quality. Less than 500 J/kg of MUCAPE exists, although with lapse rates of 6.0-6.5 C/km, cannot entirely rule out a thunderstorm or two again along the frontal passage. Winds post-front veer further to the west and eventually the northwest by Thursday evening.

D21/DTW Convection...Marginal instability will accompany a cold frontal passage Thursday afternoon-evening. There is a low chance a thunderstorm may develop along the front.

.DTW THRESHOLD PROBABILITIES...

 * Medium for ceiling at or below 5000 feet Thursday afternoon and evening.

 * Low for thunderstorms Thursday afternoon and evening (mainly 20z to 00z).
