Forecast Discussion

NWS Detroit/Pontiac · 433 AM EDT Tue Oct 20 2026

- Dry weather with mild afternoon highs and cool morning lows will
  persist into the weekend.

&&

.AVIATION...

Satellite imagery and in-situ observations highlight expansion of
shallow fog expanding from the Saginaw Bay inland due to moisture
advection from northeast flow coupled with light winds and clear
skies. Fog is holding just north of KMBS but a southward expansion
remains possible prior to daybreak which would bring visibility
restrictions down to IFR-LIFR. Hi-res model output also highlights
the possibility of fog pushing into KFNT closer to 11-13Z, but given
this timing coincides with sunrise, confidence is lower regarding
this and any subsequent visibility restrictions. Any fog observed
will burn off after sunrise, leading to clear skies and light winds
for the remainder of the day.

D21/DTW Convection... Thunderstorms are not forecast through the TAF
period.

.DTW THRESHOLD PROBABILITIES...

* None.
