Forecast Discussion

NWS Detroit/Pontiac · 656 PM EST Tue Nov 10 2026

- Low chance for patchy fog overnight.

- Increasing rain chances through tomorrow.

- A much colder airmass arrives Thursday, triggering lake effect rain and snow showers late Thursday through Saturday.

&&

.AVIATION...

Clear skies to start the TAF period in a dry post frontal airmass. Winds are out of the W-NW this evening and earlier day gusts have come to an end. High pressure will lead to light to variable winds tonight. Not anticipating any fog tonight given the dry resident airmass and the increasing coverage of high clouds through tonight will limit radiative cooling. Winds become northeasterly tomorrow with OVC skies prevailing and an eventual reduction in ceiling heights late tomorrow afternoon into the evening.

.DTW THRESHOLD PROBABILITIES...

* None.
