Forecast Discussion

NWS Detroit/Pontiac · 618 PM EST Fri Nov 6 2026

- Decreasing coverage of isolated showers into tonight with mostly
  dry and cooler conditions tomorrow.

- Dry with temperatures a few degrees above normal by Sunday into
  early next week.

&&

.AVIATION...

Compact mesoscale low pressure system is currently digging southward
over the relatively warm waters of the southern Lake Huron basin.
Good wraparound deformation forcing exists across some portions of
the area with light rain activity currently relegated to the Thumb.
Strong northerly winds have remained confined to the open waters.
The center of the low will remain vertically stacked as parent
vorticity maximum wobbles and digs southward to the eastern Lake
Erie basin by 12z Saturday. Loss of daytime heating and vertical
mixing this evening will result in lowering ceilings. An axis of
better low level moisture is expected to advect across the area
during the late evening and bring a chance for light showers or
drizzle. Dry air advection and return of daytime mixing will result
in VFR sky conditions Saturday.

.DTW THRESHOLD PROBABILITIES...

* High for ceiling 5000 ft or less through Saturday morning.

&&
