Forecast Discussion

NWS Detroit/Pontiac · 1240 PM EDT Sat Oct 31 2026

- Cool but still slightly above normal temperatures again today.

- Low chance for a isolated light showers late today towards central MI.

- Mild early to middle next week.

&&

.AVIATION...

Strong high pressure centered over the eastern Great Lakes today and tonight will sustain light winds and a feed of dry air in the low levels across Se Mi. Despite the continued influx of moisture aloft, this low level dry air will maintain VFR conditions through the TAF period. Intervals of warm air advection aloft have supported a few light rain showers/sprinkles. While isolated showers/sprinkles may persist through the day, the impacts to aviation will be minimal.

DTW/D21 Convection...No convection will occur through the TAF period.

.DTW THRESHOLD PROBABILITIES...

* None
