Forecast Discussion

NWS Detroit/Pontiac · 717 AM EDT Thu Oct 15 2026

- Showers expand into the area late afternoon and linger through early Friday morning.

- A strong cold front delivers gusty winds and much chillier conditions Friday, with a scattered showers. Lake effect rain showers develop over the Thumb by evening.

- Turning drier through the weekend with slightly warmer readings by Sunday.

&&

.AVIATION...

High pressure passing across the northern Great Lakes this morning and afternoon will bring a northeast to east wind shift, which will maintain a thick stratus deck over Ontario into southeast Michigan. MVFR ceilings look to prevail through today as moisture becomes trapped under an inversion while a low pressure system lifts northeast towards Michigan. This will also lead to likely rainfall spreading across all terminals starting this afternoon and carrying into tonight. Inversion lowers tonight bringing a period of IFR ceilings. A brief period of low level wind shear is possible as well as a strong low level jet surges atop the stable near-surface layer, but surface flow is expected to pick up overnight as surface low track across Michigan.

D21/DTW Convection...No thunderstorms before 22Z Thursday, low chance after 22z.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings at or below 5,000 feet through the TAF period.

* Low for thunder after 22Z today.
