Forecast Discussion

NWS Detroit/Pontiac · 624 AM EDT Fri Oct 16 2026

- Breezy conditions (30-40 mph), periods of rain showers, and decreasing temperatures through the day.

- Frost/freeze conditions are likely Saturday morning for portions of SE MI.

- Dry with above normal temperatures next week.

&&

.AVIATION...

Westerly wind gusts will top 20 knots this morning under post frontal cold air advection. A secondary cold frontal passage this afternoon will veer winds toward the NNW while deepening mixing depths supports 25 to 30 knot wind gusts to the surface this afternoon into the evening. Residual low level moisture will sustain MVFR based clouds well into the afternoon. Deepening convective cloud depths this afternoon along the with passage of an upper short wave will result in scattered to numerous showers, shallow enough to refrain from thunderstorm mention. Growing depth of the cold layer will trend ceilings toward VFR this evening. Deep layer dry air advection under more northerly winds will support a clearing trend at the terminals overnight into early Saturday morning.

D21/DTW Convection...Thunderstorms are not forecast today.

.DTW THRESHOLD PROBABILITIES...

* High for ceilings at or below 5,000 feet today into the overnight.

* Low in crosswind thresholds being exceeded today.
