# Forecast Discussion

NWS Detroit/Pontiac · 732 PM EDT Tue Oct 13 2026

- Some scattered showers tonight into Wednesday morning with a few rumbles of thunder, mainly south of M-59.

- More seasonable and drier during the day Wednesday, followed by additional rainfall Thursday afternoon into Thursday night.

- A strong cold front delivers gusty winds and much chillier conditions Friday, with a few showers in spots.

- Turing drier through the weekend with slightly warmer readings by Sunday.

&&

.AVIATION...

A dry cold front continues progressing across Metro Detroit this evening, causing wind direction to veer to NNW over the next few hours. Loss of daytime heating has already caused gusts to subside and will allow southward expansion of lower stratus across the area tonight. Highest confidence in MVFR ceilings is at KMBS and KFNT. A disturbance aloft brings scattered showers across the area after midnight, with an isolated thunderstorm possible mainly south of I-94. Light wind early Wednesday veers N and NE by Wednesday evening as high pressure builds into the northern Great Lakes. Inbound dry air favors scattering of lower ceilings during the afternoon, with potential for Lake Huron stratus to then move inland Wednesday night.

D21/DTW Convection...An isolated thunderstorm remains possible between 08Z and 11Z within scattered coverage of showers, but confidence remains too low to include in the TAF at this time.

.DTW THRESHOLD PROBABILITIES...

* Low for thunderstorms tonight.
