# Forecast Discussion

NWS Detroit/Pontiac · 659 PM EST Wed Nov 11 2026

- Light rain along and north of I-69 continues this evening.

- After a break during the morning, showers increase again as a strong cold front sweeps north to south over the region Thursday afternoon.

- The front also brings in a much colder air mass on gusty north wind.

- The inbound cold air activates lake effect rain/snow showers Thursday night through Saturday. Minor wet snow accumulations are likely across the Thumb, mainly near Saginaw Bay and the Port Huron vicinity.

&&

.AVIATION...

Dual low pressure systems will govern the aviation conditions through this evening into tomorrow. The southern track low is moving across the Ohio River Valley while the other northern low is pushing a cold front through central Great Lakes. Combination of lift with a moisture boost is leading to scattered shower activity and overcast skies across the terminal corridor. Main area of showers has focused more over the Saginaw Valley and Thumb as of now with limited chances for precipitation for terminals to the south. This looks to hold for at least for the next few hours as the southern systems precipitation hold south. Better rain chances will be focused along and behind the front as cold advection ramps up tomorrow behind the front along with the greater ceiling reduction to MVFR and IFR. Winds expected to be gusty to around 20-25 knots and out of the N-NE by late tomorrow morning into the afternoon.

.DTW THRESHOLD PROBABILITIES...

* Medium for ceilings at or below 5,000 feet this evening. High tonight into tomorrow morning.

&&
